

Convert Vertical/Horizontal To Line

This extension converts an SVG path's d attribute the following way: find each V (vertical line) and each H (horizontal line) and replace it by a generic line (L type). A lot of extensions do not work with V and H, but with L commands. So this is just a helper extension for other extensions. It behaves similar to [To Absolute](#)

Example conversion

from:

```
M 60.403,71.0937 V 89.268022 135.773
```

to:

```
M 60.403 71.0937 L 60.403 89.268 L 60.403 135.773
```
