

Filter

Filter paths according to specified criterion. When an option is provided (e.g. `--min-length 10cm`) the corresponding criterion is applied and paths which do not respect the criterion (e.g. a 9cm-long path) are rejected. If multiple options are provided, paths will be kept only if they respect every corresponding criterion (i.e. logical AND operator). See <https://vptype.readthedocs.io/en/stable/reference.html#filter>. Also check out [vptype Free Mode](#) which can do the same and more.
