

Glyph IDs

Source: <https://gitlab.com/EllenWasbo/inkscape-extension-getsetGlyphIDs>

These two extensions streamline the process of creating fonts using the Custom Stroke Font extension <https://github.com/Shriinivas/inkscapestrokefont>. With a font with many glyphs it might be quite cumbersome to set the ids of each glyph manually using the XML editor. Use the getGlyphIDs to fetch the IDs before editing a font - the path IDs are easily changed during editing. Use the setGlyphIDs to set the path IDs effectively based on a string input having all the glyphs ordered from left to right. Read more about this extension on [Cutlings](#).

Version #1
