

# Mutual Cut Line

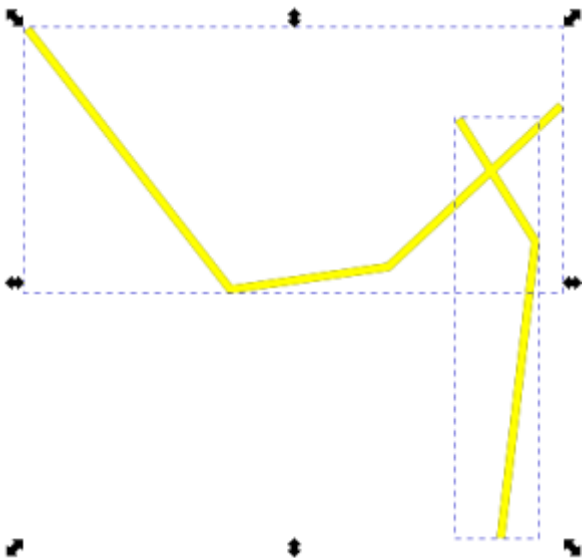

This extension cuts exactly 2 (ideally straight) path segments and will create intersected elements. Depending on the path direction (which can be reversed) the ends are going to be cut against each other

## Draw some paths

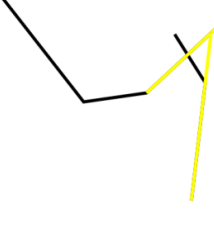

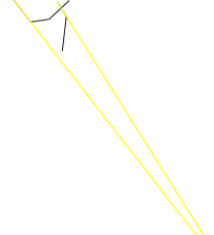

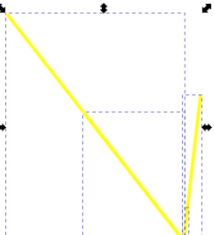

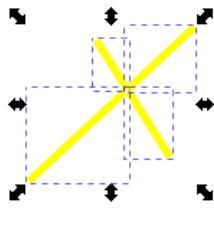

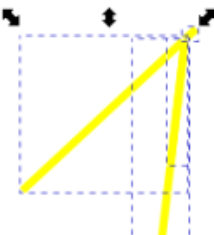

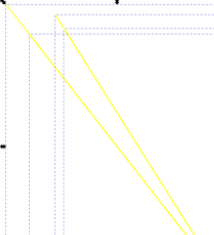

## Duplicate the paths (CTRL + D) and give some different color

This step is optional but helps to understand what's going on here

# Check the result

We repeat the previous step and this step for all variants to show the possible outputs.  
You can reverse the path using "Path → Reverse"

	Two regular paths	First and second path reversed	First path reversed	Second path reversed
Output with original as overlap				
Result only				

Version #1
