

# Open in VisiCut

This extension will add or replace the current Inkscape canvas content in VisiCut instance. Documentation can be found at

- <https://hci.rwth-aachen.de/visicut-inkscape-plugin>
- [https://github.com/t-oster/VisiCut/tree/master/tools/inkscape\\_extension](https://github.com/t-oster/VisiCut/tree/master/tools/inkscape_extension)
- <http://visicut.org>

This extension requires to install the VisiCut application itself → <https://github.com/t-oster/VisiCut/releases>. On Fedora it's easy to use the platform independent ZIP version ( <https://download.visicut.org> ). We just download, move to some system dir and add it to `$PATH` variable, e.g. in `.basrhc` .
