

Scale To Path Length

This effect makes the length of all the destination paths the same as that of the source path, while maintaining their shapes. The source is the topmost path in the selection.

Please note if the size seems incorrect after running this extension, please check if you have left some transformations. They can be removed by [Apply Transformations](#).

Draw some paths

A screenshot of a software dialog box titled "Scale To Path Length". It features a "Paste Length" tab and a "Help" button. The "Scale From:" dropdown is set to "Center". The "Scale Factor:" is a numeric input set to "1,0". The "Precision:" is a numeric input set to "5". At the bottom, there is a "Live preview" checkbox which is unchecked, and two buttons: "Close" and "Apply".
