

Known Limitations

- General issues can be found in <https://github.com/sismics/docs/issues>
- If you delete a user, all his assigned documents get deleted without asking. The proper way to omit data loss, just deactivate the user and properly assign permissions to all tags, so other people can continue working with these documents.
- standard H2 database gets really slow when having thousands of documents or documents with thousands of files inside → [Migration from H2 to PostgreSQL](#) helps! **Really**, PostgreSQL is the only useful way to be productive with Teedy!

Version #2
