

PathOps

A tool suite to run boolean operations multiple times, like Combine, Cut Path, Division, Exclusion, Intersection, Difference, Union. This extension takes a selection of one or more groups, or of several elements (paths, shapes, text), or a mix of both, and applies a chosen path operation with the top-most valid object in paint order and each other valid object which is part of the selection (directly or as member of a processed group) that is lower in Z-order. Objects which are considered "valid" for path operations are paths, shapes and text. Other graphic elements like clones or bitmap images are silently ignored.

More info about the usage can be found at https://gitlab.com/moini_ink/inx-pathops

PathOps Custom

Path operation:

- ☐ Union
- ☐ Difference
- ☐ Intersection
- ☐ Exclusion
- ☐ Division
- ☒ Cut Path
- ☐ Combine

Max operations per run: 500 - +

☒ Recurse into groups

☒ Keep top element when done

☐ Dry run

Close Apply
